Why Choose Us?

EdgeUno delivers unmatched turn key **connectivity solutions** with **low latency, high redundancy,** quick implementation time and seamless 24x7x365 support from our trilingual expert NOC.
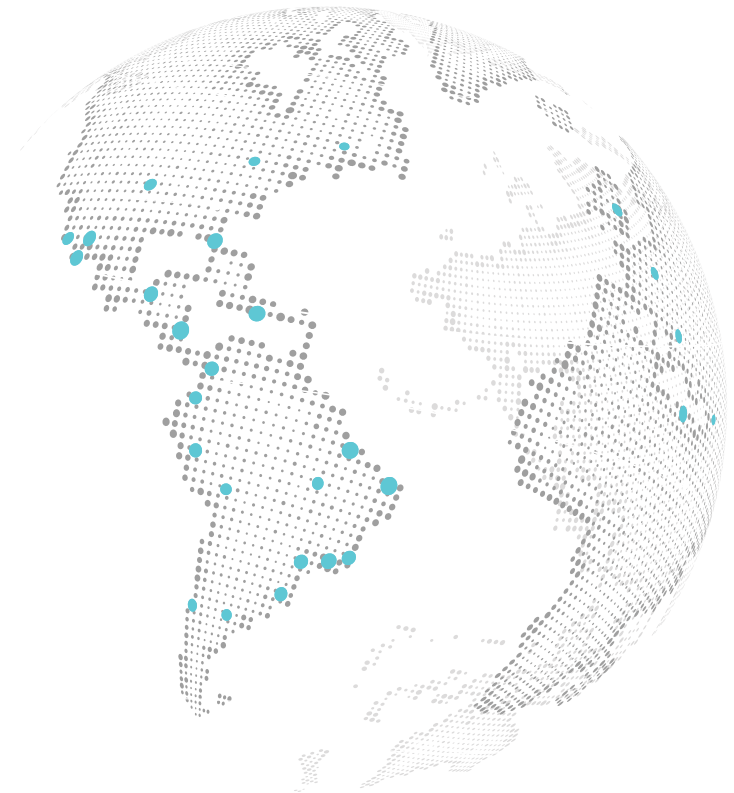

Services

Ethernet Private Line (EPL) is a Layer 2 Ethernet service that provides a dedicated, point-to-point connection between two locations. It offers complete Ethernet frame transparency and exclusive bandwidth for the customer, meaning VLANs, CoS, and Ethernet frames are fully under customer control. The service is designed for secure, high-speed, and low-latency interconnection of key sites, such as data centers, cloud on-ramps, and business offices. With support for up to 400G of bandwidth, EPL is a cost-effective solution for regional DCI, edge cache interconnection, and seamless network integration where ISPs can combine two networks into one unified environment.

Ethernet Virtual Private Line (EVPL) is a Layer 2 Ethernet service that provides flexible, multi-site connectivity using a shared physical port with multiple logical connections. Unlike EPL, which offers a single dedicated connection, EVPL allows customers to create hub-and-spoke or point-to-multipoint connectivity from a single port. This enables an even more cost-effective solution, especially for multi-customer aggregation and multi-site business interconnection, making it ideal for MSPs (Managed Service Providers). With Class of Service (CoS) prioritization and bandwidth scalability up to 400 Gbps, EVPL offers businesses cost savings, network efficiency, and dynamic scalability.

Made in Latin America

The World's **most connected** Latin American Network

E-Line (EPL & EVPL)

Power your business with versatile, secure, and scalable Ethernet solutions.

E-Line

Is a unified portfolio of Ethernet transport services that provides businesses with **dedicated, secure, and scalable Layer 2 connectivity.** It combines two key services: **Ethernet Private Line (EPL) for point-to-point connectivity and Ethernet Virtual Private Line (EVPL) for point-to-multipoint connectivity.** E-Line services enable businesses to connect branch offices, data centers, and cloud on-ramps with high-speed, reliable, and secure Ethernet links. Band- **widths up to 400 Gbps** are supported, and customers have full visibility and control over Ethernet frames, VLANs, and Class of Service (CoS) priorities.

Features

Layer 2 Ethernet Transport: services use Layer 2 Ethernet transport, allowing full frame visibility for customers.

CoS (Class of Service) Control: Customers can prioritize key traffic flows using 802.1p CoS tags.

Scalable Bandwidth (Up to 400 Gbps): services support bandwidths up to 400 Gbps, with options to upgrade instantly.

Resilience & Redundancy (1+1 Protection): Customers can choose between linear or protected services, according to their needs and realities.

Complete VLAN Transparency (EPL): No changes to customer VLAN tags, ensuring VLAN continuity from end to end.

Shared Port Multiplexing (EVPL): Multiple customers or sites share one physical port with each VLAN acting as a virtual connection of its own.

24x7x365 Support: Always-on support from EdgeUno's trilingual NOC in English, Spanish, and Portuguese, 24x7x365.

Additional Services: Leverage our colocation, remote hands, and profes-sional services at our data centers for a complete network solution.

● Existing PoP
● Future PoP

⦿ Automated Route Engineering

Enjoy the best available routes on our network delivering the lowest latency along the best throughput, automatically.

⊞ Adapt & Grow at Your Own Pace

Easily scale bandwidth when you're ready to, grow from 1 Gbps to 400 Gbps at your needs.

● Single Point of Contact

Simplify deployment with a single point of contact guiding you through every stage of the activation process.

◷ Network Ownership Neutrality

Leverage a truly neutral Latam carrier that provides the best available mixed scenarios end-to-end.

🤝 Global Reach

Leverage our over 50 live PoPs network to connect and expand into new markets in Latam and beyond.

⚙ One Stop Shop

Simplify network management with one provider for all your technology infrastructure needs.
